Machine Learning Engineer — Applied AI — LLM Systems — RAG — Scalable ML Infrastructure

TECHNICAL SKILLS

- **Languages:** Java, Python, SQL, Golang, Rust, Javascript, Typescript, C++, Shell, Bash LaTeX
- **AI:** Traditional Machine Learning, Deep Learning, Transformers, Representation Learning, Anomaly Detection (VAE), Reinforcement Learning (RLHF)
- **LLM Systems:** RAG, Prompt Engineering, LangChain, LangGraph, Vector Databases (ChromaDB), LLM Fine-tuning, LoRA, QLoRA, PEFT, HyDE
- **Infra:** AWS (EKS, S3, EC2, SQS, SNS), Docker, Kubernetes

EXPERIENCE

Netradyne

Data Engineer (ML Systems)

Bengaluru

Jul 2025 - Present

- Built scalable data pipelines for ML dataset generation and feature extraction, processing **5K+ videos within 2 hours**.
- Reduced data pipeline latency from **2 hours to 20 minutes (6x improvement)**, accelerating ML training and experimentation cycles.
- Designed distributed pipelines using **EKS, SQS, SNS, and S3** for large-scale video processing and feature engineering.
- Developed monitoring system for ML infrastructure (FastAPI, CloudWatch), reducing cloud costs by **10–15%**.

WinesecretHK

Founding Engineer (AI Systems)

Apr 2024 - Jun 2025

- Built RAG-based recommendation system combining LLM reasoning with vector retrieval to improve contextual relevance.
- Designed and implemented **HyDE-inspired retrieval pipeline** to enhance query understanding and retrieval quality.
- Implemented multi-modal pipelines (text, audio, image) enabling agentic workflows using LangChain and LangGraph.
- Deployed scalable inference services using FastAPI and AWS for real-time AI-powered recommendations.

BlackRock

Software Engineer

Gurugram

Jul 2021 - Jun 2023

- Developed data-intensive financial reporting platform processing large-scale structured datasets.
- Standardized APIs across **50+ teams**, enabling consistent data access and improving system reliability.

PROJECTS

OCR + LLM Data Extraction System

- Built end-to-end pipeline combining OCR and LLMs to extract structured data from unstructured documents.
- Designed schema-aware extraction logic for reliable downstream integration into production systems.
- [GitHub](#)

Fraud Detection using Representation Learning

- Built anomaly detection system using Variational Autoencoders (VAE) for highly imbalanced transaction datasets.
- Designed reconstruction-based scoring mechanism to detect rare anomalies beyond traditional supervised methods.
- Evaluated performance using precision-recall metrics and compared against baseline anomaly detection models.
- [GitHub](#)

LooksMaxing AI Platform

- Built AI-driven recommendation system leveraging LLM-based reasoning and contextual prompts for personalized outputs.
- Implemented real-time inference workflows for user-facing recommendations.
- [Live Project](#)

EDUCATION

M.Tech, Computer Science

CGPA: 8.90

IIT Hyderabad

2025

B.Tech, Computer Science (Networks & Security)

CGPA: 8.90

VIT-AP University

2021
