

Job Title: Data Engineer
Experience: 1 – 5 Years
Location: Remote, Pan-India

Key responsibilities

- Process complex financial data – Handle large-scale financial datasets from multiple sources, including banks, payment gateways and processors, ensuring data integrity across different formats and structures.
- Build and maintain complex pipelines – Develop and optimise pipelines that apply intricate business rules, financial calculations and transformations for accurate transaction processing.
- Time-bound and event-driven processing – Design event-driven architectures to meet strict SLAs for transaction processing, settlement and reconciliation with banks and payment partners.
- Enable reporting and AI insights – Structure and prepare data for advanced analytics, reporting and AI-driven insights to improve payment success rates, detect fraud and optimise transaction flows.

What you'll bring

- **Programming: Strong proficiency in Python and OOPS concepts, should be able to write modularise and structured code and should be an excellent problem solver.**
- Big data technologies: **Hands-on experience with frameworks like Spark (PySpark), Kafka, Apache Hudi, Iceberg, Apache Flink or similar tools for distributed data processing and real-time streaming.**
- Cloud platforms: Familiarity with cloud platforms like AWS, Google Cloud Platform (GCP), or Microsoft Azure for building and managing data infrastructure.
- Data warehousing and modeling: Strong understanding of data warehousing concepts and data modeling principles.
- ETL frameworks: Experience with ETL tools such as Apache Airflow or comparable data transformation frameworks.
- Data lakes and storage: Proficiency in working with data lakes and cloud-based storage solutions like Amazon S3, Google Cloud Storage, or Azure Blob Storage.
- Version control: Expertise in Git for version control and collaborative coding.
- **Handling Complex System: Expertise in working with complex systems and building complex system from scratch, should have good exposure in solving complex problems.**

Experience and requirements

- Bachelor's degree in Computer Science, Information Technology, or equivalent experience.
- 1–5 years of experience in data engineering, ETL development, or database management.
- Prior experience in cloud-based environments (e.g., AWS) is highly desirable.
- Proven experience working with complex systems and building complex system from scratch, with a focus on performance tuning and optimisation.
