EDUCATION

M.Tech Computer Science & Engineering

*IIT Hyderabad
2025 CGPA: 8.90*

B.Tech Computer Science & Engineering (Networks & Security)

*VIT-AP University, Amaravati
2021 CGPA: 8.90*

EXPERIENCE

Data Engineer

*Netradyne
July 2025 - Present*

- Designed and implemented scalable full-stack monitoring platform with real-time data processing, handling high-volume metrics from distributed systems using REST APIs and event-driven architecture
- Built production-grade microservices and APIs using Python, implementing scalable logging infrastructure with Kubernetes for real-time data streaming and processing at scale
- Developed high-performance data processing pipelines integrating Elasticsearch for real-time search and analytics, improving system observability and debugging efficiency by 40%
- Engineered scalable data processing systems with optimized workflows, implementing modular architecture, backward compatibility, and automated deployment pipelines
- Automated infrastructure provisioning and deployment via CI/CD pipelines, reducing operational overhead by 60% and ensuring high system availability

Tech Analyst (SDE-1)

*BlackRock
July 2021 - June 2023*

- Developed production-grade full-stack financial platform using Angular and Spring Boot, processing high-volume financial transactions and reducing operational latency from 1.5 months to 2-3 days through optimized data pipelines
- Engineered scalable microservices architecture using Java and Spring Boot, implementing complex financial business logic, payment processing workflows, and transaction validation with 85%+ test coverage, ensuring data consistency and reliability
- Built robust CI/CD infrastructure for mission-critical financial systems, achieving 50% automation in testing and deployment, ensuring zero-downtime releases and strict compliance with financial regulations
- Designed and implemented scalable REST and GraphQL APIs for financial data processing, enabling real-time transaction handling, payment reconciliation, and seamless integration across 50+ teams with secure authentication
- Developed high-performance real-time processing systems for financial transactions, ensuring accurate payment settlement, fraud detection, and compliance with strict SLA requirements for financial operations
- Collaborated in cross-functional Agile teams, working closely with product managers and business stakeholders to design scalable solutions, estimate effort, and deliver high-quality financial technology products

Tech Intern

*BlackRock
January 2021 - July 2021*

- Built scalable full-stack real-time monitoring platform using Angular and Golang, processing high-frequency metrics and transaction data with low-latency API integrations
- Implemented high-performance backend services for real-time data streaming and processing, enabling proactive system monitoring, alerting, and analytics for financial operations

Software Engineer (Contract)

*WineSecrethHK (Funded Startup)
Contract*

- Built production-ready full-stack application with AI-powered recommendation engine, processing real-time user requests and payment transactions at scale; algorithm submitted for patent
- Implemented scalable microservices architecture with FastAPI backend, handling high-concurrency requests, payment processing, and real-time data synchronization with AWS infrastructure
- Designed event-driven payment processing system with Stripe integration, ensuring secure transaction handling, real-time payment reconciliation, and reliable order fulfillment workflows
- Developed high-performance RESTful APIs for multi-modal data processing, implementing secure authentication, rate limiting, and scalable request handling for production workloads

PROJECTS

HyperLedger Fabric Blockchain Optimization - M.Tech Thesis

*arXiv:2509.07425
IIT Hyderabad 2024-2025*

- Optimized distributed blockchain architecture for high-throughput transaction processing, reducing failure rates and improving system scalability for financial applications

- Designed and implemented performance optimizations for transaction processing systems, focusing on consensus mechanisms, network architecture, and real-time data synchronization
- Published research on scalable distributed systems architecture, demonstrating expertise in building high-performance, fault-tolerant systems for financial technology applications

TECHNICAL SKILLS

- **Backend Technologies:** Java, Spring Framework, Spring Boot, Hibernate, REST APIs, GraphQL, Microservices Architecture, Python, Golang
- **Frontend Technologies:** HTML, CSS, JavaScript, TypeScript, Angular, React.js, Express.js, Responsive Web Design
- **Databases:** MySQL, MongoDB, PostgreSQL, AWS RDS, Redis (caching), Database optimization, Transaction management
- **Cloud & DevOps:** AWS (EC2, EKS, S3, CloudWatch, RDS, API Gateway, Lambda), Azure DevOps, Docker, Kubernetes, Jenkins, CI/CD, Infrastructure as Code
- **System Design:** Scalable Architecture, Microservices, Event-driven systems, High-availability systems, Load balancing
- **Messaging & Event-Driven:** Kafka, RabbitMQ, Real-time data processing, Event streaming, Message queues
- **Testing & Quality:** JUnit, Integration Testing, Test-driven development, 85%+ code coverage, Performance testing
- **Agile & Tools:** Scrum, Agile methodologies, Jira, Confluence, Git, Elasticsearch, Monitoring and Observability
- **Security & Payments:** JWT, OAuth2, Payment Gateway Integration, Secure API design, Transaction Security

ACHIEVEMENTS

- 4/5 star rating in BlackRock annual employee ratings (2021, 2022); Promotion nomination to Associate (SDE-2) for 2024
- Published research paper on HyperLedger Fabric blockchain optimization (arXiv:2509.07425); Presented at Indosys 2025 Conference
- 1st position in IITH ML Hackathon; 15th position (out of 100+ teams) in IITH Deep Learning Hackathon
- 1st position in Object Oriented Programming course (100+ students); 650+ problems solved on LeetCode
